11. Recommendation	11

## 1. Background

What is presented here is statistics on civilians affected by war in Northeast of Sri Lanka between the years of 1974-2004. By the end of 1960's Tamils have faced communal violence, denial of language rights, denial of land rights, and discrimination in education. Many negotiated pacts between Tamil political leaders and the Sri Lankan government were abrogated. Satyagraha protests were attacked by the Sri Lankan armed forces throughout Northeast and also in Colombo. Since the early 1970's, as Tamil youths, affected by these policies of the Sri Lankan state, attempted to take up armed struggle the Sri Lankan military brutality against civilians intensified, further driving the youths to join the Tamil armed groups.

While the military reprisals were carried out mainly by the Sri Lankan military, between the years of 1987-1990, Indian military also played its role in committing violence against the Tamil people. Indian military (IPKF) was invited by the Sri Lankan government to implement an accord signed by the two governments. In addition Sinhala thugs armed by the Sri Lankan military also perpetrated violence against Tamil people. Many Tamil armed groups formed to wage the struggle of liberation turned on the Tamil people when the Indian and Sri Lankan military managed to buy their loyalty. LTTE too had a role in committing human rights

violations against Tamil civilians as it tried to contain Tamil elements that have chosen to work with the Indian and the Sri Lankan militaries.

The statistics presented here covers attacks by all of these groups. People of Northeast have paid an immense price to wage the struggle for self determination right. Yet, these statistics tell only part of the story. These statistics do not cover loss of property, multiple displacement, loss of education, loss of earning, destruction of cultural, economic, and community life of people and above all the persistent fear with which they had lived under the shadow of occupying military that has committed such brutal attacks on them.

## **2. Method of collection**

The data collection project was started after the signing of the ceasefire agreement in 2002 which allowed relatively free access to all areas of Northeast. Yet, it must be noted that large scale displacement had taken place among the Tamil community. The data collection did not include those who have moved to places outside Northeast, many of whom are infant living as refugees in other countries. *Given that at least half a million Tamils have displaced to outside Northeast and that the vast majority of them were people badly affected by war, the statistics given below is incomplete. It will be a much larger project to include this sector of the Northeast population.*

Also problematic was the data collection in the east. *The actual data collection started only during the later part of 2004 and before its completion the people were visited by the tragic tsunami disaster. The project was therefore never completed in the eastern regions. This can be seen in the tables as very low figures in eastern district.*

The questioner used to collect data is a table printed over both sides of a large sheet of paper with 21 columns in it. Data on each affected person is entered in one row. The columns in the table are,

1. Row number
2. Full name of informant
3. Full name of affected person
4. Relationship to informant
5. Age of the affected person at the time of incident
6. Sex
7. Permanent address
8. Temporary address
9. Location of incident
10. Year of incident
11. Occupation of the affected person at the time of incident
12. Number of dependents on the affected person under the age of 18 at that time
13. Incident on Land or Sea
14. In what form the person is affected
15. What type of violence was used
16. Offender
17. Occasion of arrest
18. Occasion of disappearance
19. Type of limb lost

20. Other type of injury

21. Notes

Data collectors were employed on contract basis. A graduate was appointed as the coordinator for each district. Permission was obtained from the District Secretariat (Kachcheri) and the help of the Grama Sevakar was sought to ensure all households were covered. In addition, the team for each village had at least one person from that village as additional method of ensuring no household in the village is missed in the data collection.

In addition to collecting the above data affidavits were collected from families where the affected person has either died or disappeared.

### **3. Tables and Graphs**

Tables 1-6 give most of the data that will be of interest to those wishing to understand the human rights situation of Northeast.

The data presented have the following categories for the forms in which people were affected: *death, disabled, injured, disappeared, arrested, torture, and psychologically affected.*

The Sri Lankan Presidential Commissions on Disappearances have issued death certificates to many of the people who have disappeared without giving any further explanation. Therefore these have been counted as deaths caused by disappearance.

The data is also categorized into the following types of violence causing the above forms in which people were affected, *communal violence, war shock, disappearance, bombing, landmine, boat accident, after arrest, gun fire, lack medical care, helicopter-strafting, shelling, knife & sword, torture, air attack and other.*

#### 4. Table & Graph on causes of civilians being affected

Table 1 - Statistics on civilians affected by war from 1974-2004 (How they were affected)

## 10. Recommendation

In January 2005, when this report is published, the attack by military on civilians in Northeast has again begun to increase to alarming levels. This only shows that the lull in the worst form of attacks immediately after the ceasefire was signed is a superficial

change. Many international observers tended to take this lull as a change in the conduct of the Sri Lankan military. This has been proved to be wrong by the recent events. We will be issuing another report on the more recent human rights violations by the Sri Lankan military against the people of Northeast.

Our first recommendation to both parties to the conflict and to the international community is to overcome obstacles to find a resolution to the Tamil aspiration for self determination. Clearly this can occur only with the withdrawal of the Sinhala only occupying military from the Northeast. This is more so when seen against the backdrop of the enormous human rights violations committed by th is military.

Our second recommendation is to the international human rights organizations (IHRO). It is indeed difficult to establish to what extent serious human rights violations like that have occurred in the Northeast, are kept away from the focus of the human rights reports by IHRO. It is certain that the human rights violations in Northeast was not focused on sufficiently in the human rights reports of the IHRO. If the IHRO had reported the violations that had occurred in Northeast more thoroughly, it is certain that the level of violations would have been reduced.

IHRO should, therefore, examine their approaches to reporting human rights issues by examining their own reports on the human rights violations in Northeast over the three decades covered in this report.

This, as will be agreed by all, is absolutely essential if human rights is to be protected universally.
